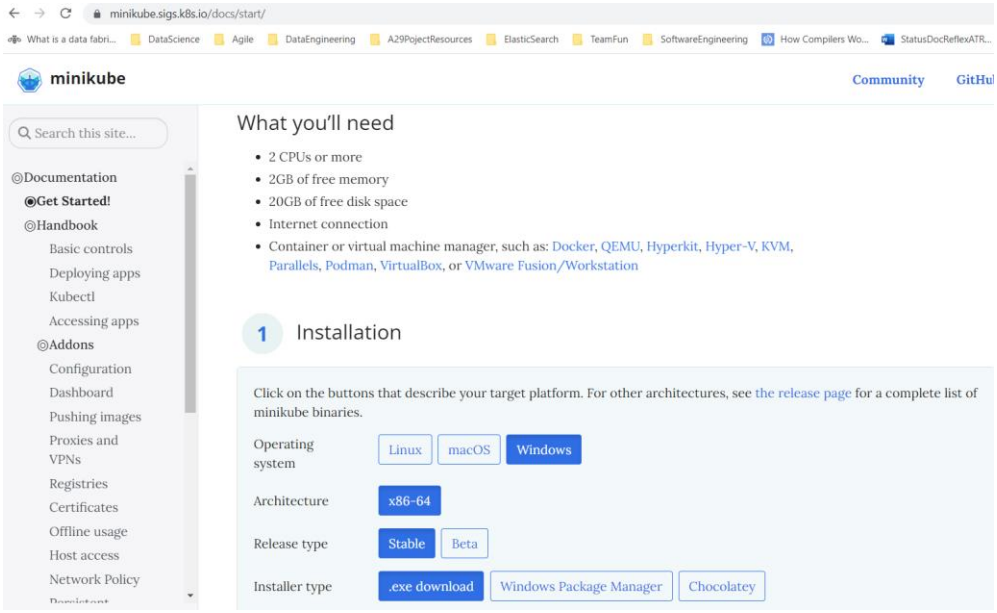
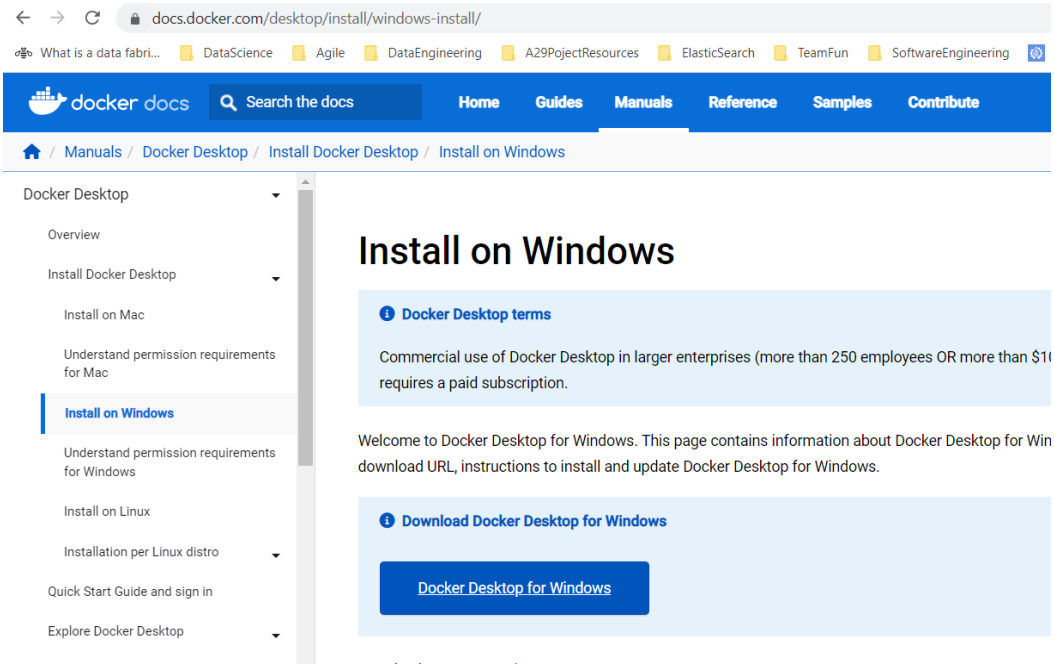
Required Software for K8S/Docker Training

1. Install git. Click here for the instructions.
2. Install minikube by visiting the following website (click here) and choosing the configurations that match your device.



3. Install dockers by visiting the following website (click here) and choosing the configurations that match your device.



Installing Docker is trickier on Windows OS than on Mac OS or any other Linux based OS. We recommend using this stack overflow site (click here) to solve any issues with Windows OS.
